SUMMARY

- Results-driven Computer Science student specializing in full-stack development with strong problem-solving skills.
- Proficient in React.js, Node.js, Express, and MongoDB with hands-on experience building scalable, high-performance web applications.
- Solved 200+ DSA problems on LeetCode; implemented advanced features such as real-time collaboration, AI integration, and secure authentication in projects.

EDUCATION

Meerut Institute of Engineering and Technology

2023 – 2027

B.Tech in Computer Science and Engineering

GPA: 8.47/10.0

PROJECTS

EcoTrace | *MERN, Groq API, Climatiq API, Tailwind CSS*

April 2026

- Built a full-stack **AI carbon accounting dashboard** where businesses log Scope 1, 2 & 3 emissions via conversational AI- **Groq Llama 3.1** extracts activity details, then **Climatiq API** computes CO2e.
- Engineered a **3-layer fallback architecture** (AI extraction → keyword matching → local formulas) ensuring **zero downtime** during API failures or rate limits.
- Built a caching-based help chatbot (FAQ → cache → AI fallback), cutting repeat-query API calls by **90%**.
- Built an interactive React dashboard for Scope-wise CO2e breakdown and monthly trends, with **CSV export** and **PDF/print** functionality on the Reports page.
- Developed an **AI recommendations panel** that surfaces priority-ranked, category-specific emission reduction strategies with quantified CO2e impact estimates.
- **Live Link:** EcoTrace | **GitHub:** Repo

SiteForge-AI | *MERN, Groq API, Framer Motion, TailwindCSS, Google OAuth*

May 2026

- Engineered a full-stack **AI-powered website builder** that converts natural language prompts into instant, fully functional HTML/CSS/JS websites via **Groq's LLM API**.
- Built a persistent **MongoDB-backed dashboard** for managing, editing, and regenerating saved websites.
- Built a template gallery with **6+ categories** and live previews, enabling instant site deployment and AI-assisted customization via prompt-based edits.
- Integrated **Firestore Authentication** and **Razorpay** payment gateway for secure, subscription-based access control.
- Built live preview with **raw code export** for self-hosting, plus **one-click deployment** for instant shareable links.
- **Live Link:** SiteForge-AI | **GitHub:** Repo

FitSync | *ReactJS, Strapi, TypeScript, Gemini API, TailwindCSS, PostgreSQL*

June 2026

- Developed a full-stack **health and workout management system** with manual food logging and activity tracking to help users monitor daily nutrition and fitness progress.
- Built an **AI Food Snap feature** using **Google Gemini API** to identify food items and estimate calories from uploaded images.
- Used **Strapi** as a headless CMS to build and manage **REST APIs** for the backend.
- Implemented secure user authentication and protected routes using **JWT**.
- **Live Link:** FitSync | **GitHub:** Repo

TECHNICAL SKILLS

Programming Languages: JavaScript, Java, Python (Basics), SQL (PostgreSQL)

Frontend: React.js, Tailwind CSS, HTML/CSS

Backend: Node.js, Express.js, REST APIs

Databases: MongoDB, MySQL

DevOps & tools: Git, GitHub, AWS, Postman

Soft Skills: Problem Solving, Team Collaboration, Creativity

ACHIEVEMENTS

- Selected to represent institute at **Smart India Hackathon (SIH)**, a national-level government-backed hackathon, for developing an **AI-based Universal Forensic Extraction Device (UFDR) Report System** to accelerate digital evidence analysis for cybercrime investigation units.

CERTIFICATIONS

- **AWS Certified Cloud Practitioner** (Verify)
